Examiner's Statement of Reasons for Allowance

1. Claims 1-27, 29-49, and 51-52 are allowed.
2. The following is an examiner's statement of reasons for allowance.

The prior art made of record fails to anticipate or make obvious the claimed invention. The claims are allowable over the art of record because the art of record do not teach all of the claim limitations. Specifically, the prior art fails to teach, in combination with the remaining elements:

a GUI that presents a plurality of annotation identifiers corresponding to the multimedia content and that enables a user to request selected ones of the plurality of annotations, based on the plurality of annotation identifiers, and to render the requested annotations as recited in claim 1; an annotation set selector via which a user can identify one or more of a plurality of annotation sets to be searched as recited in claim 12; the graphical user interface to comprise a target check box, whereupon selection of the target check box causes the network client to add, as an additional search criteria, a media content identifier as recited in claim 13; an annotation identifier list via which an identifier for each of a plurality of annotations corresponding to the media content is displayed, the identifier including an indication of a type of content included in the annotation as recited in claim 16; an annotation identifier portion that identifies a plurality of annotations corresponding to the video content, wherein the annotation identifier portion identifies each of the plurality of annotations by an annotation subject line as recited in claim 23; analyzing at least a portion of the media content to identify a likely temporal location of the media content to associate the new annotation with, and presenting the likely temporal location

Art Unit: 2174

to the user via the user interface as recited or similarly recited in claims 30, 32, and 42; selecting, based on the user request time, a presentation time of the media content to associate the new annotation with, wherein the presentation time is a different time than the user request time as recited in claim 47; and presenting a plurality of annotation identifiers corresponding to multimedia content that enable a user to request selected ones of the plurality of annotations, based on the plurality of annotation identifiers, each of the plurality of annotations including annotation content and a temporal range identifier that identifies a segment of the multimedia content to which the annotation corresponds, and each of the plurality of annotations being available from an annotation server as recited in claim 51.

While Eberman teaches a multimedia annotation method wherein users are inherently provided with an user interface to generate/add, review and update annotations, Eberman fails to teach the step as cited above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
